TOOLS	Adobe Photoshop, Adobe Illustrator

01 / SUSTAINGRC — THE SYSTEM

A SYSTEM, NOT A SET OF POSTS.

A 44-page guideline defines the logo rules, eight approved colours, a one-typeface type system, the grid and nine template families — so anyone on the team can produce on-brand posts at feed speed.

THE ROLE OF THE SYSTEM

Five constants, every post

Layouts change with the message; these five never do. They make any SustainGRC post recognisable before a word is read, whoever produces it.

1. **Logo corner** — Official lockup, top-left, 232 px wide at 80/80.
2. **Eyebrow** — 22 px bold capitals, +22% tracking, names the post type.
3. **Two-tone headline** — White or Ink with one teal phrase.
4. **One teal element** — A single accent owns each surface.
5. **Footer band** — 120 px band, hairline, locked line left, series label right.

PROPOSED

VERIFIED CONTRAST

Every text pairing used in the templates

Ratios computed from the hex values with the WCAG 2.1 relative-luminance formula. AA requires 4.5:1 for body text and 3:1 for large text (≥ 24 px bold at 1:1 view). Brand rule: on light fields Teal 500 is text only at 24 pt and above — below 24 pt use Teal 700. Ink on Teal 500 is 5.86:1, calculated from the tokens; this is the single figure used throughout.
